

Q3 3 amended) The scanner recited in claim <sup>2</sup>/~~4~~ wherein said vibration is a pseudo random pattern of vibration.

Q4 5 amended) A scanner which includes a linear array of detector elements each of which generates output signals, at least some of said detector elements each having a width equal to a first value,  
means for moving said array over said document in a pre-determined pattern of motion in a first direction,  
means for moving said array of detectors in a direction perpendicular to said first direction,  
means for combining the output signals from at least some of said detectors to generate a square array of pixel values which represent an image, each pixel having a size equal to said first value,  
whereby certain the patterns become visible in said image.

Q4 6 amended) A scanner which includes a linear array of detector elements to produce scan data corresponding to an image comprising:  
a device for moving said array over said document in a direction "y",  
a transducer for moving said array of detectors in a direction "x", direction x being non-aligned with direction "y", and  
a drive circuit for applying a control signal to said transducer to effect random movement in said direction 'x',  
whereby Moiré patterns in the said image are reduced.

Q5 8 10 amended) The method of scanning a document which consists of a series of rows of areas with a linear array of detectors,  
the distance between the center points of said detectors equaling a first value, said rows being arranged in a direction "y", said method comprising:

A
